

SALVO

Flame System

The Salvo Flame System is an extremely versatile system that can provide up to 40 feet of flame on command. It can be secured down to any flat surface or mounted to a truss using an available adapter. The burner is water and weather resistant. This system provides a reliable and cost-effective option for companies who need a rugged and sleek one-piece flame system that provides plug and play capability with DMX and show controllers. The Salvo is listed by ARL testing lab to the NFPA 160 standard. This unit can be fueled by the any of the FCL, FCH, or FP series fuel systems we offer.
